

Dear Smartvent

My 3 story stucco home is built on concrete pilings with the garage, tool room and entry on the first level. The first level is at the 100 year flood plain with 6 stainless steel smartvents installed. Hurricane Ike pushed water above historic levels and flooded the lower areas. The smartvents operated as designed and opened properly, relieving the pressure from the flood waters. The houses structure was not damaged. Thank you for your product.

Regards,

Wendell Wilson
