

Autauga County Habitat for Humanity thankful for partnership with Smart Vent and Block USA

Autauga County Habitat for Humanity is grateful for the partnership with Smart Vent and Block USA for their donation of the flood vents for the affiliate's latest home. The home is being built for a hard working single mother and her three children. The land that was donated to the affiliate is in a flood plain, and with the use of these vents, along with learning the best practices for building a home in a flood plain, the affiliate was able to make good use of this land to help provide affordable housing to this family.

The affiliate met with Carl Wilson, Prattville City Code Enforcement Inspector in the Flood Mitigation department, to learn what was needed to build a home in a flood plain and avoid costly mistakes. Based on information Mr. Wilson had from educational conferences, he was able to share about Smart Vent with Habitat.

Program Director, Kelly Nice, made contact with Garrett Tirpak about obtaining the vents for the home being built at 410 West 6th Street. The organization was thrilled to learn that Smart Vent and Block USA were able to help out by donating the needed vents. This Habitat affiliate feels confident that the home they have built will be protected from any possible flood damage through the use of these Smart Vents.
